***Allowable Subject Matter***

Claims 22-54 allowed.

The closest relevant art is Shamine et al (5,607,500) wherein Shamine et al teach a device for separating impurities from the lubricating oil of an internal combustion engine (col. 2, lines 65-67) comprising a two piece housing having a stationary lower housing part (14) and a removable upper screw cap (16), a filter element (56) wherein the filter element (56, col. 3, lines 33-35) is arranged in the two-piece housing (14, 16) that is closed during operation of the device, and the screw cap (16) comprising detachable connection means (85) which can be brought into contact and are used to transmit axial tractive forces wherein the connection means (85) is arranged to be brought into contact by rotating the screw cap (16) in its loosening rotational direction and arranged to be disengaged by rotating the screw cap (16) in a tightening rotational direction (see Fig. 1, col. 3, lines 62-64). Shamine et al further teach snap-on hooks means (unlabeled in Fig. 2) which can be moved in an axial direction into and out of the ring in relation to each other (see details of Fig. 2, col. 3, lines 18-67), and locking connection wherein the connection means is formed by a circle of locking hooks with locking noses (see details of Fig. 2, col. 4, lines 10-30).

Claims 22-27 of this instant patent application differ from the disclosure of Shamine et al in that the screw cap and the filter element comprise detachable connection means which can be brought into contact and are used to transmit axial tractive forces.

Claims 28-38 of this instant patent application differ from the disclosure of Shamine et al in that the screw cap and the filter element comprise detachable connection means which can be brought into contact and are used to transmit axial tractive forces, and the connection between the first connection means being formed as a locking connection, wherein the connection means on the filter element are formed by a circle of locking hooks with locking noses.

Claims 39-54 of this instant patent application differ from the disclosure of Shamine et al in that the screw cap and the filter element comprise detachable connection means which can be brought into contact and are used to transmit axial tractive forces, and the connection between the first connection means between the screw cap and the filter is a rotary connection.
